Technology Stack

Front-End Development

- **React**
- **TypeScript**

- **Vue.js**
- **Next.js**

Animation & Interactive Experiences

- **Three.js**
- **GSAP (GreenSock Animation Platform)**
- **Framer Motion**
- **Lenis** — Smooth scrolling and scroll-based interactions

These technologies are used to create modern, responsive, interactive, and performance-conscious web experiences.

Design & Visual Direction

Our websites combine modern UI trends with premium visual systems to create distinctive digital experiences.

Core Design Styles

- **Liquid Glass / Glassmorphism**
- **Swiss Design**
- **Neo-Classical Design**
- **Bento Grid Layouts**
- **Light & Dark Themes**
- **Cyber / Digital Aesthetics**
- **Mixed-Media Gallery Experiences**
- **Minimal & Editorial Interfaces**
- **Premium Motion-Driven Layouts**

The design approach is adapted to the brand and business rather than applying the same visual style to every project.

Motion & Scrolling Experiences

Interactive motion is an important part of our development process. Depending on the project requirements, we implement:

- Scroll-based animations
- Smooth scrolling
- Horizontal scrolling experiences

- Scroll progress indicators
- GSAP-powered animations
- Framer Motion transitions
- Three.js / WebGL experiences
- Glitch effects
- Blur & reveal animations
- Glass and refractive visual effects
- Gradient and chromatic effects
- Micro-interactions
- Parallax effects
- Section reveal animations
- Interactive hover states
- Motion-based UI transitions

The goal is to use animation strategically to improve **user experience, visual hierarchy, engagement, and storytelling**, rather than adding motion purely for decoration.

Performance & SEO Considerations

While developing animation-heavy websites, we also consider:

- **Largest Contentful Paint (LCP)**
- Core Web Vitals
- Image optimization
- Responsive performance
- Lazy loading
- Animation performance
- Mobile optimization
- Semantic HTML
- SEO-friendly page structure
- Efficient asset loading

Animations and visual effects are implemented with consideration for performance across different devices and screen sizes.

Typography & Font Systems

We use a combination of modern sans-serif, editorial, and premium serif typefaces depending on the brand identity and design direction.

Sans-Serif Fonts

- Manrope
- Montserrat
- Plus Jakarta Sans
- Space Grotesk
- General Sans
- Satoshi
- Geist

Serif / Editorial Fonts

- Playfair Display
- Source Serif 4
- Baskerville
- Fraunces

Typography is selected based on the project's **brand identity, readability, visual hierarchy, and overall design language**.

Design Inspiration & References

For visual research, UI exploration, and modern interaction patterns, we reference platforms such as:

- **Godly**
- **21st.dev**

These resources are used for inspiration and exploration while developing original designs tailored to each individual project.
